March 21st, 2016

Dear Fradkin family:

I am writing to thank you for having chosen to sponsor our grant “Regulation of cortical interneuron migration and epilepsy” under the Team S4 Award. As you know, our research focuses on understanding the processes that lead to neuronal dysregulation in the developing brain that may contribute toward the pathogenesis of pediatric epilepsies.

Your contribution to our research has enabled my laboratory to move forward in a timely manner to carry out high impact studies that will one day contribute to the design of better diagnostic and therapeutic tools to manage pediatric epilepsies. Your efforts to raise awareness for epilepsy and funding for research are commendable and we are honored to be a part of the S4 Team effort.

We look forward to sending you periodic updates of our research. Also, we would like to extend an offer for Sarah to visit our laboratory if she has an interest in seeing first hand the types of experiments that we do!

With best wishes,

Natalia
